CORE ADVANTAGE

Effective Grooming

- Designed with cows' body shape and habits in mind, the brush provides comfortable grooming for the trunk, neck, head, rump, and tail of cows.

Easy Start/Stop

- With a highly sensitive tilt sensor, the brush automatically rotates on reaching the triggering angle, and stops when cows do not push against it. It is easy for cows to use.

Safety

- The safety switch stops the brush when it gets overheated or overloaded, to ensure safety.

Durability

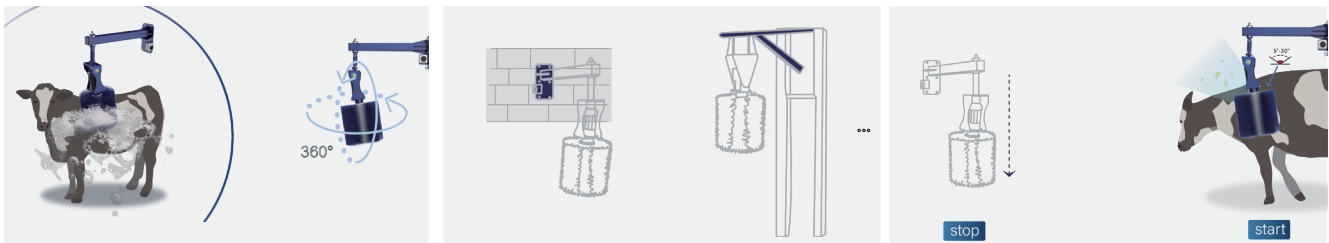

- The NSK bearing and nylon bristles ensure robust scratching and superb durability.

Power Saving

- The brush stops automatically when cows make no contact with it, avoiding waste of power.

Easy Installation

- Multiple sets of mounting holes are provided on the bracket, allowing for installation on different poles and walls.
